

mobyAccess

Contactless Palm Vein Authentication

A security system based on tested and proven Fujitsu PalmSecure™ technology, mobyAccess is highly reliable and accurate, secure and easy to use. Forgery is virtually impossible with its advance technology.

WHAT IS mobyAccess?

A security software using contactless palm vein based authentication device for security access to electronic files, applications, database etc.

mobyAccess detects palm vein patterns that contain detailed characteristics that are unique to individuals. It is highly accurate with extremely low false rates.

HIGHLY RELIABLE

Palm vein pattern is captured by near-infrared light sensor, generating a unique biometric template.

The device only recognizes the pattern if the blood is actively flowing within a person's veins. This makes forgery virtually impossible as the person must be alive and be personally there to scan his or her palm.

Patterns on different on left and right palm and can be used for different access.

EASY and NON-INTRUSIVE

Contactless and quick scanning makes it easily accepted by users. It only takes a few seconds to register and to authenticate.
